NATIONAL STEEL CONSTRUCTORS ANNOUNCES RECORD  
\$60 MILLION BILLINGS IN 2008

**Environmental compliance requirements in the Power industry, including the construction and installation of Air Quality Control Systems, are among primary growth drivers.**

POWER-GEN International, Booth #1469, ORLANDO, Dec. 2, 2008 – National Steel Constructors LLC, one of the nation’s leading steel and power industry equipment installation construction companies, today announced it has recorded \$60 million in to-date revenues in the current 2008 fiscal year. National’s surging growth is fueled by the construction of turnkey Air Quality Control Systems (AQCS) required by various environmental mandates affecting the Power industry.

National established its footprint and reputation in the construction of AQCS following its acquisition of Birmingham, Ala.-based Steel City Erecting. National’s other Power industry construction offerings include SCRs, Scrubbers, and FGD systems and designed and manufactured absorbers (both wet and dry), that increase the cleanliness of emissions released by power generators into the atmosphere.

"National brings to the project good boilermakers and ironworkers that specialize in absorber and structural steel erection," said Gary E. Ferguson, P.E., Vice President Construction, Advatech. "National continues to do a very good job for us on a number of Power projects nationwide."

National President and CEO Robert J. Dunn said his team brings more than 300 years of combined management experience, exemplifying National's commitment to quality and expert project completion.

"We are an industry leader in developing and introducing new technologies which offer the most competitive pricing, the highest quality possible, absolute adherence to safety standards, compressed lead times, and project completion all within the project owner's schedule however stringent that schedule may be," Dunn said.

The company also reported consistent growth across its other lines of business, including the construction of steel mills, industrial manufacturing facilities, convention centers, airports, sports arenas, and other heavy industrial projects with complex requirements.

### **About National Steel Constructors**

Building on marquee experience in more than 30 states nationwide, Plymouth, Mich.-based National Steel Constructors, LLC is a steel erection, rigging and turnkey systems installation company. National specializes in managing major, complex, fast-track projects including Air Quality Control Systems for power plants; airport facilities; aircraft assembly plants; arenas; automotive manufacturing plants; convention centers and steel mills. Since 1998, NSC has consistently ranked in the top 12 of *Engineering News Record's* listing of Structural Steel Erection firms.
